Security Edge is a high security master key system designed to keep you secure for years to come.

From a single building to a complex multi-site operation, Security Edge systems can be tailored to suit all types of infrastructure.

It's flexibility and compatibility make it the #1 choice for an optimal keying system to protect residential, commercial, and industrial sites.

Security Edge is a high security key system with a registered design until 2034.

That means that only the locksmith you have trusted with your security is legally permitted to duplicate and create keys compatible with your Security Edge system.

Take control of your key management.
Use the 8 different colour key pips that are available to co-ordinate and identify access levels with ease.

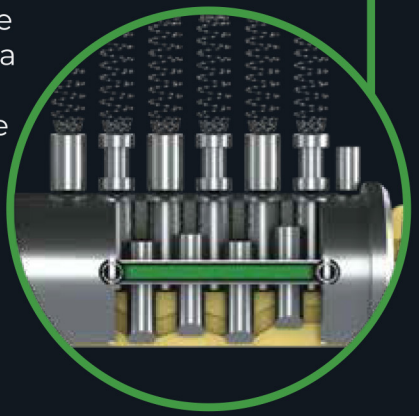
Protection for your:

Home
Office
Shop
Hotel
School
Hospital
Restaurant
Construction Site
Apartment Complex

KEY SECURITY WITH AN EDGE

Each of the keys in your Security Edge master key system feature uniquly designed cuts in their side. These cuts match the sidebar in the cylinder for extra security. When a key with the correct sidebar pattern is inserted it lines up with the unique sidebar loaded inside the cylinder. This allows the key to enter and rotate the lock to open.

The cylinder also has a 6 pin inline keying system. It is protected by a hardened pin that prevents drill attacks. The combination of these systems gives your security the edge it has been missing.



FEATURES:

- SC8 Pick resistant
- SC8 Bump resistant
- SC8 Drill resistant
- SC8 Strong 2.3mm nickel silver keys
- D8 Durable cylinder - 114286 cycles
